Is it a Reportable Data Breach?

Scenario	Yes	No
On returning from a coffee meeting with a customer, a Relationship Manager realises that he has lost a folder containing 50 customer business cards.		
An employee's mobile phone has been infected with a virus, which gives an individual the ability to look at the files on their phone, including photos; contacts; communications and receipts of financial transactions.		
While at a Christmas Function, an employee leaves their laptop, containing details of 10,000 home insurance policies, behind in a bar. The laptop is never handed in but was protected with by whole disk encryption. The encryption key was not compromised.		
A doctor's surgery is a victim to a ransomware attack which encrypts a whole database of customer records. The doctors are not able to access the records of patients who are undergoing treatment for a range of illnesses. While the records are temporarily unavailable, there is no breach of confidentiality.		
A cloud storage app is hacked resulting in the publication of private photos to the public.		
A trust company's in-house database became corrupted so that all customer records could not be accessed, after a significant power failure. The company has a backup of all its systems.		
An employee in Human Resources mistypes an email address and accidentally sends confidential information regarding a company's employees to an outside domain.
